2. The Alphabetize class below, alphabetizes three words. Consider the following examples. Write the Alphabetize class.

Values of Strings s1, s2, and s3 before	Values of s1, s2, and s3 after
String s1 = "cat"; String s2 = "car"; String s3 = "dog";	String s1 = "car"; String s2 = "cat"; String s3 = "dog";
String s1 = "dog"; String s2 = "cat"; String s3 = "car";	String s1 = "car"; String s2 = "cat"; String s3 = "dog";

3. The Crypto class, encrypts messages by replacing all c's with "c'mon" and all o's with "ouch!". The final encrypted message is stored in a variable called "encrypted". Consider the following examples,

<b>String msg</b>	<b>String encrypted</b>
Encrypto my message	Enc'monryptouch! my message
Get off the couch!	Get ouch!ff the c'monouch!uc'monh!

Write the Crypto class below,

```
public class Crypto{

    public static void main(String args[]){

        String encrypted = "";
        Scanner s = new Scanner(System.in);
        System.out.println("Type a message to encrypt");
        String msg = s.nextLine();

        }

}
